John Cochran Division
- 3 positions

Jefferson Barracks Division
- 2 positions

Training Sites

The primary training site for these ASHP-accredited residency programs is the St. Louis VA Medical Center, including both the Jefferson Barracks and John Cochran Divisions. A tailored online, real-time computer system links all hospital departments, provides access to information sources, and retrieves data from other tertiary care centers.

PGY-1 Residency - John Cochran

Three of the PGY-1 Residency positions are primarily based at the St. Louis VA Medical Center, John Cochran Division. The medical center provides primary, secondary, and tertiary care to Veterans of the St. Louis metropolitan area, eastern Missouri, and southern Illinois. Services include acute care medicine, surgery, associated inpatient subspecialties, and comprehensive general/specialty ambulatory care.

Additionally, the medical center serves as a training site for medical residents from both the Saint Louis University and Washington University medical schools.

PGY-1 Residency - Jefferson Barracks

The PGY-1 Residency at the Jefferson Barracks Division is primarily based in the Geriatric Research, Education, and Clinical Center (GRECC) at the St. Louis VA Medical Center. The GRECC clinic provides clinical pharmacy experience in geriatric ambulatory care in an interdisciplinary health care setting. Training is also provided in the Geriatric Evaluation and Management (GEM) rehabilitative care unit at the VA. Both the GRECC and GEM are training sites for medical residents and geriatric fellows from Saint Louis University Medical School.

For both programs, elective rotations may be arranged through St. Louis College of Pharmacy at affiliated institutions in the greater metropolitan area.

Serving Those Who Served

Program Goals

- Provide evidence-based, patient-centered medication therapy management within interdisciplinary teams. This includes patient/disease assessment, drug therapy evaluation, selection of therapeutic regimens, and patient- or population-specific drug therapy monitoring.
- Manage and improve the medication use process.
- Exercise leadership and practice management skills.
- Demonstrate project management skills.
- Provide medication and practice-related education/training.
- Utilize medical informatics.
- Improve communication ability through formal and informal interactions with patients, caregivers, and health care professionals.
- Develop teaching ability through participation in didactic and clerkship instruction of pharmacy students, medical students, and residents.
