

Further details of reports included in Table, "Pooled Venous Thromboembolism (VTE) Rates Among 4068 Thalidomide-Treated and 1081 Lenalidomide-Treated Patients With Multiple Myeloma." The table includes all studies that were included in the JAMA letter as well as additional studies that did not fit into any of the treatment regimens included in the JAMA letter.

Table 1. Venous thromboembolism (VTE) rates (%) among thalidomide treated patients

	Disease	Agent(s) other than thalidomide	Prophylaxis	VTE rate (Patients with VTE/Total patients)	Control arm VTE rate (if applicable)	Reference	
Untreated multiple myeloma patients that received dexamethasone chemotherapy and no prophylaxis (14% (109/795))	Untreated multiple myeloma	Dexamethasone	No prophylaxis	23% (3/13)		Abdelkefi et al. 2005. Bone Marrow Transplant, 36: 193.	¹
