WESTERN UNIVERSITY OF HEALTH SCIENCES

Introduction

The VA Greater Los Angeles Healthcare System (VAGLAHS) is one of the largest health care facilities within the Department of Veterans Affairs. It is one component of the VA Desert Pacific Healthcare Network (VISN22) offering services to Veterans residing in Southern California and Southern Nevada. VAGLAHS consists of two ambulatory care centers, a tertiary care facility and 8 community based outpatient clinics. VAGLAHS serves Veterans residing throughout five counties: Los Angeles, Ventura, Kern, Santa Barbara, and San Luis Obispo. There are 1.4 million Veterans in the VAGLAHS service area. VAGLAHS is affiliated with both UCLA School of Medicine and USC School of Medicine, as well as more than 45 colleges, universities and vocational schools in 17 different medical, nursing, paramedical and administrative programs.

The *West Los Angeles Healthcare Center (WLA)* is a tertiary care teaching facility dedicated to providing a wide array of acute and ambulatory patient care services to our nation's veterans. The comprehensive diagnostic and treatment services provided include a broad range of medical, surgical, and psychiatric care. Internal medicine subspecialties include cardiology, infectious diseases, gastroenterology, allergy, pulmonology, nephrology, endocrinology, rheumatology, and hematology/oncology. Major

surgical subspecialties include orthopedics, urology, neurosurgery, ophthalmology, plastics, ENT, podiatry, and cardiothoracic surgery. In addition to the main acute care hospital, there is a 180-bed nursing home, a hospice unit, and Home-Based Primary Care.

The *Sepulveda Ambulatory Care Center (SACC)* offers a state-of-the-art ambulatory care facility. The center has specialty outpatient programs in spinal cord injury, stroke rehabilitation, women's health, preventative medicine, dentistry, mental health, and chemical dependency. Extended care activities include a 120-bed nursing home and a Home-Based Primary Care Program. The facility hosts extensive clinical and basic science research, including Geriatric Research Education and Clinical Center (GRECC) and Field Program for Health Science Research and Development (HSR&D). The HSR&D program evaluates provider practice and patient outcome studies in the delivery of ambulatory health care.

The *Los Angeles Ambulatory Care Center (LAACC)* is located in the heart of Downtown Los Angeles. It serves as a centrally located facility for the diverse veteran population of the city of Los Angeles, focusing on primary care and mental health services. The clinic provides special services in post-traumatic stress disorder, day treatment, medical services, and mental health services.

General Information

The VAGLAHS offers PGY2 specialty residency programs in the area of Neurology and Ambulatory Care, as well as a 2-year fellowship in Cardiology.

The **PGY2 Pharmacy Residency in Neurology** is one of the only neurology residencies offered in the nation and is currently the first and only ASHP accredited Neurology Residency. It is a twelve-month long program that provides a very diverse experience in both the acute care and ambulatory care settings. Training is primarily conducted at WLA.

The **PGY2 Pharmacy Residency in Ambulatory Care** is a twelve-month long program currently in candidate status for accreditation by ASHP. This program is primarily conducted

within a designated Center of Excellence in Primary Care Education (CoE PCE) in WLA's Homeless Patient Aligned Care Team (HPACT) and is focused on providing interprofessional care to the underserved.

The **Pharmacy Fellowship in Cardiology** is a two-year joint program funded by Western University of Health Sciences. Fellows will obtain clinical experiences at the VAGLAHS in ambulatory care and possibly the acute care setting, depending upon the interests of the fellow. The trainee will be involved in academia, obtaining faculty status at the WU College of Pharmacy, as well as research. Candidates interested in the Cardiology residency/fellowship would apply through Western University.

PGY2 Pharmacy Residency in Neurology

Program Description

This specialty residency provides a comprehensive experience in contemporary neurology pharmacy practice, particularly in the areas of stroke and epilepsy. Clinical experiences in movement disorders, dementia/neurobehavior, and general neurologic disorders, such as headache and neuropathy, are offered, as well. Interested residents also have the option of integrating neurosurgery experiences into the training year. The resident will practice clinical pharmacy in an acute setting, as well as in an ambulatory setting. Residents are offered the ability to tailor the program to meet their interests in the field of neurology

Neurology preceptors include skilled physician providers, neurology pharmacists, and research faculty members with

extensive experience in this specialty, as well as in research and academia.

Residents will be involved in teaching, with possible appointment as Adjunct Assistant Professor at the USC School of Pharmacy. Teaching opportunities include didactic and small group facilitations, as well as precepting pharmacy students and PGY1 pharmacy practice residents.

Clinical and laboratory based research opportunities are available. Residents are required to complete a neurology-oriented research project suitable for presentation and publication. The resident will be given the opportunity to develop a neurology-related research question based on their experience.

Practice Experience

West Los Angeles Healthcare Center (WLA):

Primary Preceptor: *Sunita Dergalust PharmD, BCPS*

Inpatient Experiences

- **Acute Care Neurology:** The resident will be responsible for reviewing and monitoring drug therapy and antimicrobial, heparin, and anti-epileptic drug pharmacokinetic dosing consults to physicians and allied healthcare professionals. Residents will serve as the drug therapy specialist, as well as a pharmacy educator on the team. Residents will provide education to patients on management of risk factors for secondary stroke prevention. They will actively participate in interdisciplinary team meetings and medical rounds. The medical team consists of Board Certified Neurologist attendings, UCLA Neurology fellows, UCLA Neurology residents, UCLA Psychiatry interns, and a clinical pharmacist.
- **Epilepsy Monitoring Unit:** This is a specialized unit that was developed as part of the Epilepsy Center of Excellence, used to properly identify seizure localization and subsequent surgical candidates. The resident will work closely with the Neurology fellow and will be responsible for obtaining a detailed admission history and medication history for long term video EEG monitoring. Residents will actively participate in assessing/planning safe drug titration on and off AEDs.
- **Acute Care Neurosurgery:** The resident will be responsible for reviewing and monitoring drug therapy and antimicrobial and anti-epileptic drug pharmacokinetic dosing consults to physicians and allied healthcare professionals. Residents will serve as the drug therapy specialist, as well as a pharmacy educator on the team. Resident will actively participate in interdisciplinary team meetings and neurosurgical rounds. The medical team consists of UCLA Neurosurgery attendings, UCLA Neurosurgery residents and Surgery interns, and a clinical pharmacist.

Ambulatory Care Experiences

- **Stroke Clinic:** In this clinic, residents will have the opportunity to assess/initiate/adjust medication regimens

under the supervision of clinical pharmacists and attending physicians. Resident responsibilities in the clinic also include: interviewing patients prior to seeing their provider, reviewing medication profiles for drug interactions, appropriate dosing, therapy duplication, possible medication-induced side effects, and assessing compliance and barriers to compliance.

- **Seizure Clinic:** In this one half-day per week clinic, residents will have opportunities to assess/initiate/adjust AEDs under the supervision of clinical pharmacist and attending physicians. In addition to having the same general responsibilities as those identified for the Stroke Clinic, residents, will assure a comprehensive AED history is obtained, as well as appropriately monitor seizure response.
- **Headache Clinic:** In this clinic, residents will have the opportunity to assess/initiate/adjust medication regimens under the supervision of clinical pharmacists and attending physicians. In addition to having the same general responsibilities as those identified for Stroke Clinic, residents will also educate patients regarding signs and symptoms of headache, as well as triggers.
- **Dementia/Neurobehavior Clinic:** In this one half-day per week clinic, residents will have the opportunity to conduct an in-depth review of medication profiles, evaluating all medications and their potential to contribute to memory disorders. Residents will also be involved in telephone titration of dementia medications.
- **Movement Disorder Clinic:** In this one half-day per week clinic, residents will have the opportunity to provide detailed counseling on medications to patients diagnosed with various movement disorders such as Parkinson's, ataxia, and tremor.
- **General Neurology Clinic:** In this two half-day per week clinic, residents will have the opportunity to provide detailed counseling on medications to patients diagnosed with general neurologic disorders, particularly headache and neuropathy.

PGY2 Pharmacy Residency in Ambulatory Care

Program Description

This specialty residency offers a comprehensive experience in ambulatory care with an opportunity in providing care to the underserved. VAGLA's HPACT program is a nationally designated Homeless PACT, focused on delivering "whole health care." Established in July 2014, HPACT's four interprofessional teams are among the country's most highly concentrated groups of integrated mental health and primary care teams.

VAGLA is one of seven VA facilities designated as a Center of Excellence in Primary Care Education (CoE PCE) and has established an Interprofessional Academic PACT within our HPACT program (iA-HPACT). The iA-HPACT was created as a learning lab to promote the transformation of VA into interprofessional learning experiences to prepare trainees to practice, lead, and thrive in team-based health-systems.

The resident will participate in HPACT and PACT activities as integral members of the interprofessional team approximately seven half-days per week. An equivalent of approximately one

day per week will be devoted to experiences in select subspecialty clinics, in blocks of six to twelve weeks, depending upon the rotation and the interest of the resident.

Ambulatory care preceptors may include skilled physician providers, ambulatory care pharmacists, providers from other disciplines, and research faculty members experienced in their respective specialty, as well as in research and academia.

Residents will be involved in teaching, with possible appointment as Adjunct Assistant Professor at the USC School of Pharmacy. Teaching opportunities include didactic and small group facilitations, as well as precepting pharmacy students and PGY1 pharmacy practice residents.

Research project is required for successful completion of this program. The resident will be given the opportunity to develop an ambulatory care-related research question based on their experience.

Practice Experience

West Los Angeles Healthcare Center (WLA):

Primary Preceptors: varies depending upon clinic

HPACT/PACT Experience

- **Four Days per Week:** The resident will be involved with providing clinical pharmacy services to HPACT patients on the iA-HPACT team with trainees from other disciplines (Primary Care Internal Medicine, Psychiatry, Nurse Practitioner, and Psychology). The resident will also work with other healthcare staff, such as RN Care Managers, licensed vocational nurses (LVN), and social workers. The resident will participate in morning team huddles, patient-team huddles for complex patients, team meetings, continuous quality improvement and workflow meetings, and learning seminars. Program learning goals emphasize complex care of homeless Veterans and interprofessional (IP) team collaboration. The curriculum will address IP competencies in five domains: complex care of homeless Veterans, IP collaboration; sustained relationships; shared decision making; performance improvement. This component of the residency is longitudinal.
- The resident will be involved with providing clinical pharmacy services to HPACT and PACT patients. Responsibilities include complex medication management of patients referred to pharmacy for chronic diseases such as diabetes,

hypertension, and dyslipidemia as well as prescription processing, medication counseling, provision of drug information, patient/provider education. Residents may also be involved in shared medical appointments (SMA), as well as in innovation and implementation of new services. This component of the residency is longitudinal.

Specialty Experiences

- **One Day per Week:** The resident will practice in various subspecialty clinics, in blocks of six to twelve weeks throughout the year, depending upon the rotation and the interest of the resident. This may include experiences in specialties such as anticoagulation, women's health, anemia, hepatitis C, tobacco cessation, neurology, geriatrics, infectious disease, and cardiology. Depending upon the practice of pharmacy within each of the specialized clinics, responsibilities may include activities such as complex medication management of patients referred to pharmacy, clinical video telehealth (CVT), electronic consults (e-consults), shared medical appointments (SMA), and patient education.

Program Description

VAGLAHS PGY2 Pharmacy Residents must successfully complete all required longitudinal and block rotations. Residents will select up to 3 elective blocks, ensuring 6 of 8 blocks are occupied by a block rotation.

Program Components	Description
Rotations Offered	<p>REQUIRED LONGITUDINAL</p> <ul style="list-style-type: none"> -HPACT/PACT -HPACT CoE -HPACT Staffing <p><i>Block rotations are 1-2 days per week for 6 weeks, unless otherwise noted:</i></p> <p>REQUIRED BLOCK</p> <ul style="list-style-type: none"> -Anticoagulation (6-12 weeks) -Cardiology -GI/Hep C (6-12 weeks) -Neurology <p>ELECTIVE BLOCK</p> <ul style="list-style-type: none"> -Geriatrics -Nephrology -Women's Health -Infectious Diseases
Diseases/Conditions Covered	<p>As required by ASHP, residents must have direct patient care experiences in at least 8 of the 15 areas identified in the appendix of <i>Required Competency Areas, Goals, and Objective for Postgraduate Year Two (PGY2) Ambulatory Care Pharmacy Residencies</i> (https://www.ashp.org/-/media/assets/professional-development/residencies/docs/pgy2-ambulatory-care-residency-competency-areas-goals-objectives.ashx), two of which may be covered by case-based application through didactic discussion, reading assignments, case presentations, and/or written assignments.</p> <p>Experiences in the following areas will be offered: Cardiology, Endocrinology, Gastroenterology, Men's Health, Neurology, Psychiatry, Pulmonology. Additional experiences can be offered in Dermatology, Geriatrics, Infectious Disease, and Rheumatology.</p>
Staffing Requirements	Staffing for PGY2 residents are incorporated longitudinally and do not require completion on additional days.
Residency Research Project	Residents are required to complete a research project suitable for presentation at a regional conference. Residents are also required to complete and submit a manuscript for publication and prepare and submit a poster presentation of their research project.
Teaching Responsibilities	<p>Residents will have the opportunity to precept APPE pharmacy students (Level IV), as well as IPPE pharmacy students (Level I/II/III), pharmacy interns, and pre-pharmacy students.</p> <p>Residents also have the option of a joint academic appointment with the USC School of Pharmacy which offers opportunities to teach and lecture to Level II and Level III PharmD students. Residents are provided the opportunity to participate in various scheduled coursework and seminars developed to enhance the residency experience. Those residents participating in this affiliation will receive faculty appointment and earn a teaching certificate from the university. Participation may be an entire year or isolated to the 2nd half of the year depending upon the prior experience of the resident. A separate interview with USC may be required for this affiliation. Residents interested in the affiliation are also required to have an active California license.</p>

Pharmacy Fellowship in Cardiology

Program Description

Western University of Health Sciences is an institution with a focus in graduate-level education of health science professionals. Founded in 1977, the university is a small, private, health-focused institution that fosters interprofessional learning. The university is committed to preparing graduates, in a learner-centered academic and professional environment, who will serve the health care needs of society for today and for the future.

The PGY2 Pharmacy Residency/Fellowship Program in Cardiology is a joint program between Western University of Health Sciences and the VA Greater Los Angeles Healthcare System (VAGLAHS). It is available as a 12-month PGY2 non-degree residency program or 2-year fellowship in cardiovascular pharmacy, depending upon the interests of the

trainee. Since this is a two-campus program involving Western University and VA West Los Angeles Healthcare Center, residents are required to rotate at both sites, depending on required activities.

The program offers a well-balanced clinical experience between ambulatory care and acute care cardiology. Experiential and didactic teaching, as well as research activities, completes the program. The program is divided into monthly rotations and provides residents with clinical insights and practical experiences in cardiology practice, teaching, and research.

Practice Experience

Inpatient Experiences

- **Acute Care Cardiology:** During the rotation, the resident will be responsible for reviewing and monitoring drug therapy for the purposes of identifying, preventing and resolving drug-related problems with the patient and the healthcare team. Residents will serve as the drug therapy specialist as well as a pharmacy educator on the team, actively participating in interdisciplinary team meetings and medical rounds. The medical team includes Board Certified Attending Cardiologists, Cardiology fellows, medical residents, and a pharmacist.
- **Consults and Procedures:** The resident will have the opportunity to participate in the cardiology consult service, gaining an appreciation for treating patients with heart disease who are not admitted directly to the inpatient cardiology service. In addition, the resident will have the opportunity to observe various cardiac procedures, including, cardiac angiograms, percutaneous coronary interventions, echocardiograms, electrophysiological procedures, and stress tests.

Ambulatory Care Experiences

- **Cardiomyopathy Clinic and Risk Reduction Clinic:** In these two multidisciplinary clinics, the resident will have opportunities to conduct medication interviews, assess cardiovascular therapy regimens, educate patients and providers, and act as the drug therapy specialist under attending pharmacist/physician supervision. Resident responsibilities in the clinics include reviewing medication profiles for drug interactions, appropriate dosing, therapy duplication, possible medication-induced side effects, and assessing adherence and barriers to adherence.
- **Anticoagulation Clinic:** In this pharmacist-managed clinic, the resident will be responsible for assessing/adjusting medication regimens, ordering and following up on laboratory tests results under clinical pharmacist supervision. Resident responsibilities in the clinic also include: reviewing medication profiles for drug interactions, appropriate dosing, therapy duplication, possible medication-induced side effects, and assessing adherence and barriers to adherence.

Program Requirements

Teaching Responsibilities

Residents will be required to participate in didactic teaching and assessment within the Western University PharmD curriculum, precept Western U pharmacy students during their rotations, and conduct multidisciplinary presentations to the cardiology healthcare team.

Research Project

Residents are required to complete a cardiovascular-oriented research project suitable for presentation and publication. Residents are also required to participate in other ongoing research with the program director.
