Introduction

The Memphis Veterans Affairs Medical Center (VAMC) PGY2 Internal Medicine Pharmacy Residency is a 12-month training program that aims to train highly motivated and qualified pharmacists to provide exceptional care for adult internal medicine patients. The practice setting is a 250-bed tertiary VA hospital in Memphis, TN. The pharmacy resident will work as an integral member of the healthcare team, along with medical residents, fellows and students affiliated with the University of Tennessee Health Science Center. The resident will have the opportunity to develop practice management skills, participate in educational programs, provide formal lectures, and precept pharmacy students. The resident will also participate in projects designed to improve patient care and outcomes. Flexible training schedules allow the resident to pursue areas of personal interest while meeting the educational goals of the program. Appointment is within the Federal government, and residents are therefore subject to all regulations and requirements of the Federal system.

Purpose:

The purpose of the PGY2 Internal Medicine Program is to build upon the resident's Doctor of Pharmacy education and PGY1 pharmacy residency programs to contribute to the development of clinical pharmacists in Internal Medicine. The PGY2 Internal Medicine residency provides residents with opportunities to function independently as practitioners by conceptualizing and integrating accumulated experience and knowledge and incorporating both into the provision of patient care or other advanced practice settings. Residents who successfully complete an accredited PGY2 Internal Medicine pharmacy residency are prepared for advanced patient care, academic, or other specialized positions, along with board certification, if available.

Summary:
