PGY-2 Psychiatric Pharmacy Residency

The PGY2 pharmacy residency program builds on Doctor of Pharmacy (Pharm.D.) education and PGY1 pharmacy residency programs to contribute to the development of clinical pharmacists in specialized areas of practice. PGY2 residencies provide residents with opportunities to function independently as practitioners by conceptualizing and integrating accumulated experience and knowledge and incorporating both into the provision of patient care that improves medication therapy. Residents who successfully complete an accredited PGY2 pharmacy residency should possess competencies that qualify them for clinical pharmacist and/or faculty positions and position them to be eligible for attainment of board certification in the specialized practice area (when board certification for the practice area exists).

The Salem VA HCS PGY2 program is a PGY2 Psychiatric Pharmacy Residency. The primary focus of this program is to develop a pharmacy practitioner with knowledge, skills, and abilities in psychiatric pharmacy who will be equipped to participate as a clinical pharmacy practitioner and be an integral member of an interdisciplinary team caring for individuals with psychiatric and neuropsychiatric disorders.

Culturally and socially responsive practice is integral to the mission of our residency program at the Salem VA HCS. We recognize the importance of acknowledging and supporting individual differences in our residents and believe that fostering a culturally rich and diverse training environment is essential for a strong residency program. We promote an awareness of, and sensitivity to, individual and cultural diversity across multiple settings during the residency experience.
